Factsheet

PRODUCT REGISTRATION GUIDE

Registering your chemicals for collection

Unwanted agvet chemicals may be a result of one or more of the following:

- expiration
- oversupply
- inheritance
- unknown
- banned
- deregistered

ChemClear® collects both currently registered chemicals, **Group 1** and unknown and deregistered chemicals, **Group 2.**

When preparing to register with ChemClear please take the time to prepare an inventory of your unwanted chemicals.

Your inventory should include the:

- manufacturer's name
- product name
- container size
- number of containers
- estimation of remaining chemical in container
- container integrity

There are two ways you can register for the next collection:

1. Complete the **Inventory of Unwanted Chemicals Registration Form** available for download at www.chemclear.org.au
2. Or request the registration form by phoning **1800 008 182.**

If you are registering an unknown chemical, we need the following identifiers completed on the registration form:

- product descriptor if known eg. suspect arsenic, or "unknown"
- size of the container eg. 10L
- number of containers
- estimation of quantity remaining in the container
- container integrity

CLASSIFICATIONS

Group 1 chemicals are **collected free of charge** under the program. These chemicals are currently registered agvet chemicals manufactured by companies supporting the Industry Waste Reduction Stewardship initiative. These chemicals are identified by a ***drum****MUSTER* eligible logo on the chemical label or embedded into the container.

drumMUSTER eligble logo

Group 2 chemicals are those chemicals that are no longer registered, unknown, unlabelled, out of date, mixed agvet chemicals or chemicals from non-partcipating manufacturers. A litre/kg fee applies for disposal unless a state government subsidy is in place.
